## Features:

- Remote mounting in 18 mm hole
- 48" (122 cm) 26 AWG wired with mounting nuts
- Non-contact infrared switch
- Up to 24 " or more reflective distance depending on object
$\qquad$

## Description:

OPB725 uses an Infrared LED and Photologic® sensor in a reflective switch configuration. The assembly is offered with a standard wire length of 48 " [ 122 cm ], and uses an opaque housing to reduce the sensor's ambient light sensitivity. The emitter and sensor are protected by a window clear to near infrared wavelengths, providing a device that can operate in a dusty environment. The Photologic® sensor has an NPN Open-Collector output providing the user a device that can be used in a variety of applications.

While an object is in the reflective path of the device, light from the LED will be reflected back to the housing irradiating the surface of the Photologic $®$ sensor causing the output NPN transistor to turn "ON" to provide a "low" voltage output when connected to appropriate value pull-up resistor. When the Infrared light from the LED is not being reflected to the Photologic sensor, the output transistor turns "OFF," minimizing the $\mathrm{I}_{\mathrm{C}(\mathrm{ON})}$ current, providing a "High" output.

Custom electrical, cabling and connectors are available. Contact your local representative or OPTEK for more information.

## Applications:

```
- Non-contact reflective object sensor
- Door sensor
- Assembly line automation
- Machine safety
- Machine automation
- End of travel sensor
- Equipment security
```

Notes:
(1) RMA flux is recommended. Duration can be extended to 10 seconds maximum when flow soldering.
(2) Methanol or isopropanol are recommended as cleaning agents. The plastic housing is soluble in chlorinated hydrocarbons and keytones.
