## Worldwide circuit protection solutions

Eaton is a world-leading supplier of Bussmann series medium voltage fuses. Each product is backed by an efficient worldwide distribution network with unrivaled service and technical support. Eaton circuit protection solutions comply with major international standards: ANSI, BS, DIN, IEC and UL.

### Fuse types

Medium voltage fuses generally fit into two categories – expulsion fuses and current limiting fuses. The definitions per ANSI C37.40 are:

**Expulsion fuse:** “A vented fuse in which the expulsion effect of the gases produced by internal arcing, either alone or aided by other mechanisms results in current interruption.” Expulsion fuses will limit the duration of an overcurrent event, but they will not limit the magnitude of fault current.

**Current-limiting fuse:** “A fuse unit that, when in its current-responsive element is melted by a current within the fuse’s specified current-limiting range, abruptly introduces a high resistance to reduce current magnitude and duration, resulting in subsequent current interruption.” A current limiting fuse will reduce the magnitude of a fault current as well as limit the duration of the overcurrent event when operating in its current limiting range. Eaton offers a broad range of current limiting fuses for protection of feeders, transformers and motor circuits designed to ANSI, BS, DIN and IEC standards.

### Medium voltage current-limiting fuses

Current limiting fuses are classified into three categories:

1. Full range – defined by ANSI C37.40 as “a fuse capable of interrupting all currents from the maximum rated interrupting current down to the minimum continuous current that causes the melting of the fusible element(s), when the fuse is applied at the maximum ambient temperature specified by the manufacturer.” It is able to interrupt any current that will melt its element.

2. General purpose – defined by ANSI C37.40 as “a fuse capable of interrupting all currents from the maximum rated interrupting current down to the current that causes melting of the fusible element(s) in one hour.” Not all currents fall within this range. It is possible for the fuse to be exposed to an overcurrent lower than the value given by the one hour criteria. In that case, a different overcurrent protection device would be required to interrupt the overcurrent.

3. Back-up – defined by ANSI C37.40 as “a fuse capable of interrupting all currents from the maximum interrupting rating current down to the minimum interrupting current.” The minimum interrupting current is the lowest current that the fuse will be able to clear properly. This creates a need to place a low current interrupting device, such as motor overloads, in series with the back-up rated fuse.

### E- and R-Rated fuses

In North America, current limiting fuses typically fall into the category of E-Rated fuses and R-Rated fuses. Eaton also offers a wide range of current limiting fuses designed to BS, DIN and IEC standards.

E-Rated fuses are used to protect feeder circuits, power transformers and potential transformers. E-Rated fuses have defined current response times specified by ANSI C37.46. E-Rated fuses 100A and below must melt in 300sec at an rms current within the range of 200% to 240% of the continuous current rating. E-Rated fuses above 100A must melt in 600sec at an rms current within the range of 240% to 264% of the continuous current rating of the fuse. Eaton offers a wide variety of full range and general purpose E-Rated fuses from 2.4kV up to 38kV.

R-Rated fuses are back-up fuses that provide short-circuit protection for motor circuits. They are applied with MV motor starters which provide the overload protection for the circuit. R-Rated fuses also have defined current response times specified by ANSI C37.46. R-Rated fuses will melt in a range of 15 – 35sec at a current equal to 100 times the “R” rating. Eaton offers 2.4kV, 5.08kV, 7.2kV and 8.3kV R-Rated fuses for motor circuit protection.

**2.75kV E-Rated fuses****Description:**

- E-Rated, current-limiting, medium voltage fuses for feeder circuit, switchgear and transformer protection.

**Catalog symbols:**

**8.3kV E-Rated fuses****Description:**

- E-Rated, current-limiting, medium voltage fuses for feeder circuit, switchgear and transformer protection.

**Catalog symbols:**

- 8CLE-\_E-D (10-25A)
- 8CLE-\_E (10-350A)
- 8HLE-\_E (10-350A)

**Ratings\*:**

- Volts — 8.3kV
- Amps — 10 to 350A
- Interrupting ratings — 50kA RMS Sym

\* See catalog number tables for voltages, ampacities and interrupting ratings by catalog number.

**Agency information:**

- E-Rated fuses meet the performance characteristics of ANSI C37.46

**15.5kV E-Rated fuses****Description:**

- E-Rated, current-limiting, medium voltage fuses for feeder circuit, switchgear and transformer protection.

**Catalog symbols:**

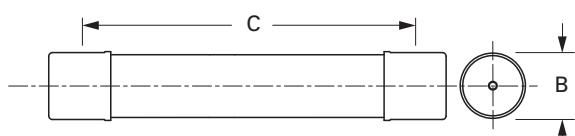

- General purpose
  - 15CLE\_E-D (long construction, 10-25A)
  - 15CLE\_E (long construction, 15-300A)
  - 15HLE\_E (short construction, 10-250A)
  - 15LHLE\_E (intermediate construction, 65-300A)
  - Full range (per ANSI C37.40)
  - MV155F\_

## 2.4kV R-Rated fuses

### Description:

- Indoor/enclosure, R-Rated medium voltage, current-limiting fuses for motor circuit protection.

### Catalog symbols:

#### Code-(amps)R Construction

2CLS-25	Standard (25A only)
2ACLS-25	AMPGARD Hookeye (25A only)
JCK_R	Standard (2R-24R)
JCK-A_R	AMPGARD Hookeye* (2R-24R)
2HCLS_R	Hermetically sealed AMPGARD Hookeye* (25A/2R-24R)
2BCLS_R	Bolt-on (25A/2R-24R)

\* For use in 400 amp AMPGARD motor starters.

### Specifications

#### Description:

Medium voltage, non-time delay, fast-acting fuses.

**Dimensions:** See basic catalog numbers table.

#### Ratings:

Volts: — 1-10kV (see basic catalog numbers table)

Amps: —  $\frac{1}{16}$ -10A (see basic catalog numbers table)

#### Features and benefits

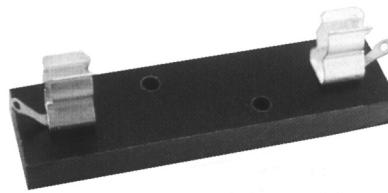

- Physical size varies with electrical rating of fuse to prevent over-fusing.
- Space saving size.

#### Typical applications

- Medium voltage instrument protection
- Medium voltage circuit protection

## British standard dimensioned IEC fuses for motor circuit protection

The Bussmann series range of motor fuses are designed to meet the specific requirements necessary for motor protection. During the starting cycle of direct on-line motors, the fuse elements will reach a considerably higher temperature than during normal operation; (this is due to the high amount of current the motor will draw as it starts, typically, six times its normal load current value). This results in expansion and contraction of the fuse elements and could cause premature operation of the fuse.

Bussmann series of motor fuses encompass an advanced design to minimize this effect. This therefore, negates the need to over specify the fuse rating due to high values of motor starting current.

Bussmann series of motor fuses operate extremely quickly under heavy fault currents, resulting from the time / current characteristic. Low power dissipation ensures low temperature rise, important in multi-tier starters for example. Switching (arc), voltages are lower than permitted values, therefore, 5.5kV fuses are also suitable for 4.8kV and 2.4kV circuits.

# Expulsion fuse links for use in high voltage distribution cut-outs

## Specifications

**Description:** Expulsion fuse links available in a wide range of options from 15kV to 72kV in ANSI T and K characteristics.

## Ratings:

Volts: — 15 to 72kV

Amps: — 1 to 100A

Breaking capacity: depends on voltage but is approximately 8kA

## Agency information:

Type T: complies with ANSI C37-42  
Type K: complies with ANSI C37-42

## Features and benefits

- Wide range of options available from 15kV to 72kV in ANSI T and K characteristics.
- Extra rapid option also available.

## Packaging:

Up to and including 50A: 25 in a carton

From 60A to 100A: 10 in a carton

To avoid incorrect replacement the fuse links have colour coded labels:

Pink label: Type XA

Yellow label: Type K

Green label: Type T

## Typical applications:

- Primary side transformer protection
- Feeder protection
- Capacitor bank protection

## Use of application

Expulsion fuse links current ratings should be selected on the basis of maximum expected transient no damage currents rather than on full load current. In addition, the selection of higher current ratings will reduce the possibility of supply interruption due to transient surges such as those due to lightning strikes.

Links should be handled with a reasonable degree of care when installing. Excessively rough handling may damage the element.

It is normal, under certain fault conditions, for arc extinguishing material and/or metal particles to be expelled from the fuse assembly. It is therefore recommended that reasonable precautions be taken to prevent the installation being approached by unauthorised persons.

## How to order - parts referencing system

Rated voltage (kV)	1st letter Type of current characteristics	2nd letter Type of termination	Rated current (A)
15	T = complies with ANSI C 37-42 requirements for slow acting T characteristics	B = a fixed NEMA button head link	1, 2, 3, 4, 5, 6, 7.5, 8, 10,
25		U = a universal link, with double tail and slip off NEMA button head	12, 15, 20,
46		D = double tailed link without NEMA button head	25, 30, 40,
72	K = complies with ANSI C 37-42 requirements for fast acting K characteristics		50, 60, 65,
	XA = this type of expulsion fuse link has an extra rapid characteristic. It is suitable for applications where a high degree of system protection is required at the expense of discrimination	BR = as pattern B but the button head is attached via a 1/4 UNF thread to allow use of an extension rod.	75, 80, 100
	S = Solid links rated at 100A are also available in both button head and universal versions for fitting into expulsion fuse carriers where required. These can be ordered in a similar way using the abbreviation S, e.g. 15SB, etc	See outline drawings opposite page for reference	

Thus a typical ordering reference for a 15kV NEMA Type K, button head 30A fuse link would be 15KB30 expulsion fuse link.

The fuse link assembly for a given range is standard to all rated voltages. The exception is that the tail length is varied to suit the dimensions of expulsion carrier of different ratings.

## EEI-NEMA Type K and T — Type H and N

### FL: Type H and EEI-NEMA Type K and T fuses

#### Specifications

**Description:** Medium voltage fuses: Type H (high surge), EEI-NEMA Type K (fast-acting), EEI-NEMA Type T (slow-acting).

#### Ratings:

Amps: — 1-200A  
(See catalog numbers tables)

#### Features and benefits

- Wide range of EEI-NEMA type fuse links for use in open fuse cutouts
- Voltage ratings up to 27kV.
- Can be coordinated with other overcurrent protective devices for sectionalizing to isolate feeder branches.

#### Typical applications

- Medium voltage fused cutouts

#### High-surge Type H fuses

High-surge, Type H fuses are manufactured in ratings of 1, 2, 3, 5, and 8A. They have been developed principally for primary fusing of small-sized transformers. Type H links are manufactured in the universal buttonhead design.

#### Type N fuses

Type N fuses conform to previous NEMA standards and have been superseded by Type K and T links. Type N fuses are manufactured in the universal button design in ratings of 5 through 200A for use in NEMA standard dimensioned cutouts rated through 27kV.
